- Conclusions...on transition from sporadic to systematic registration system

Hystorical context of the land registration system in Romania

- ❖ There are different types of cadastral systems across Europe, due to the many differences concerning their cultural, economical and social backgrounds.

constant process of updating the cadastre

the structure of the register in 3 pages: page A for objects, page B for owners and ownership and page C for obligations

(The Central European Land Registry System)

cadastral plans at scale of 1:2880 or 1:1440 and land registers

Political and social context of the land registration system in Romania

✓ The cadastral system of a country reveals its economical and social level of progress.

✓ The political climate led to some deficiencies in the cadastral system, which are characteristic to ex communist countries:

- the land was removed from the civil circuit
- collectivization of agriculture
- the restriction of property rights

➤ Registry of property surrender obligations

✓ After 1990, real estates were returned to their rightful owners, which led to a significant increase of the society's interest in property.

✓ It is absolutely necessary to assure the informatization of the activity related to general cadastre, to provide a complete evidence of lands and buildings, for a high efficiency on the real estate market, for secure transactions and assigning values for taxation, complying with the European standards.

Objectives of the systematic land registration in Romania

To organize a unitary system of all data related to real estate properties across the country

To provide a complete evidence of lands and buildings, complying with the European standards

To assure the use of digital data at any level of the process.

To provide an efficient and secure registration of real estates

To provide an improved coordination between the technical and legal components

General principles of the systematic land registration

- ❑ the principle of free recording of the buildings;
- ❑ the principle of registering all the buildings of an administrative-territorial unit, with the identification of all the owners;
- ❑ the principle of mass registration in compliance with the field reality, in a short time and with low costs;
- ❑ the principle of the official character of the systematic land registration;
- ❑ the principle of opposability effect of the recordings in the land registry - according to this principle from the time of starting the land registry it is assumed that the third party is aware of the recordings made in the land registry.

The systematic land registration

MAIN STAGES

Organising and developing the advertising campaign

Achieving cadaster preliminary works

Interviewing owners at their home or in the field

Conducting specialized works

Reception of the cadaster technical documents

Publishing of the cadaster technical documents

Receiving and solving rectification applications

Updating the cadaster technical documents

Opening of the land registry

Finalising of the technical cadaster works

Benefits of the systematic land registration in Romania

Registration at no costs for citizens and any legal entity

Facilitating UE fundraising for agricultural grants

Completing the process of land reform

Registration of state and public lands

Creation of Address Register (A.N.C.P.I.)

Registration of buildings

Clarify owner identity problems

Contribution to INSPIRE implementation

INSPIRE

(Infrastructure for Spatial Information in the European Community)

Products of the INSPIRE directive in Romania:

- E-Terra – integrated cadastre and land registration informatic system
- TransDatRO - software for coordinate transformation from the national coordinate system reference in the European reference system and vice versa
- TOPRO5 – the reference topographic plan, scale 1:5000
- I.N.S.P.I.R.E. Geoportal of Romania - application for metadata documents
- Joint Border Commission - verification work of the border between Romania and neighbouring countries

E-Terra

MAIN OBJECTIVES

improvement and computerization main work streams of National Agency for Cadastre and Land Registration

automating certain processes

standardization of working documents

securing information

system tracking events

reduce paper documents archive

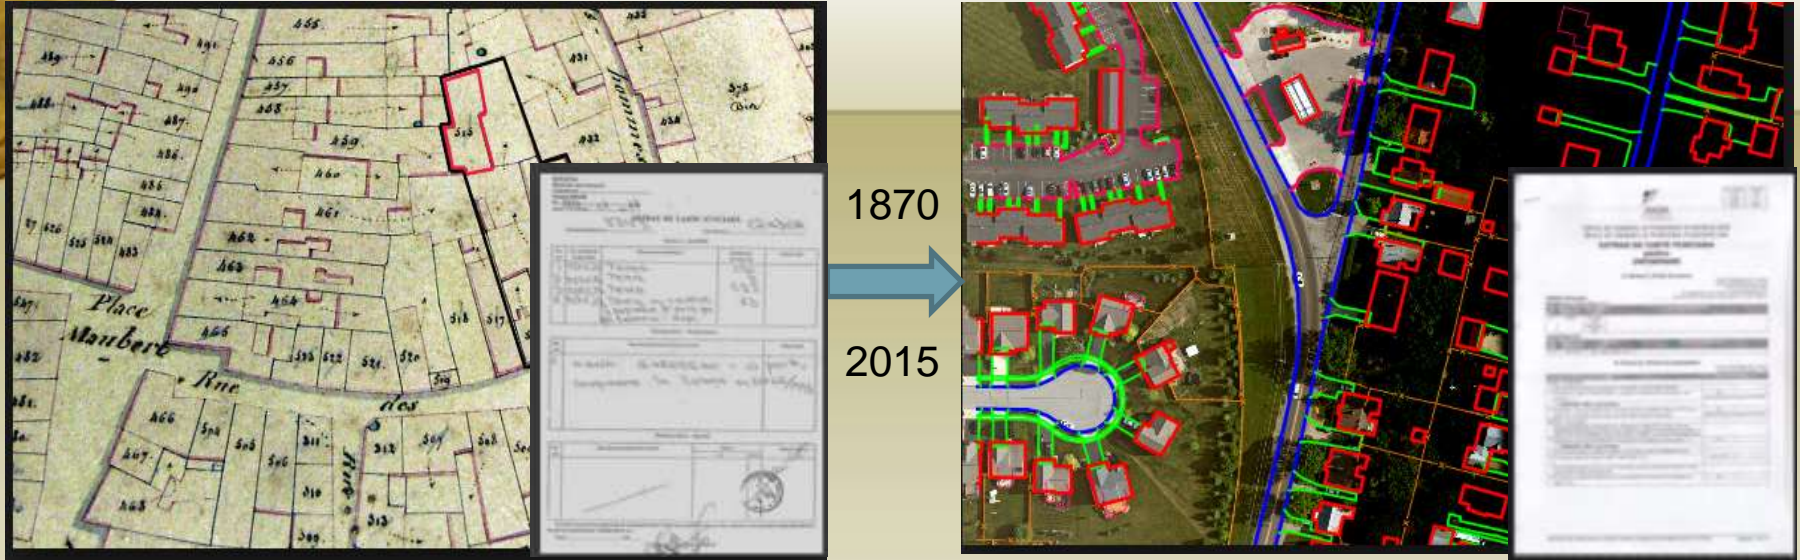

reduce the time to handle requests

quick access to archive data

Past, present and future

- ✓The system manages a unique database containing the graphical and textual data related to cadastral and legal record.
- ✓Through E-TERRA, each property of every administrative territorial unit is entered into the computer system by converting analog data into digital format and is assigned a new cadastral number called parcel identifier.

The organizational structures of the cadastral and legal records

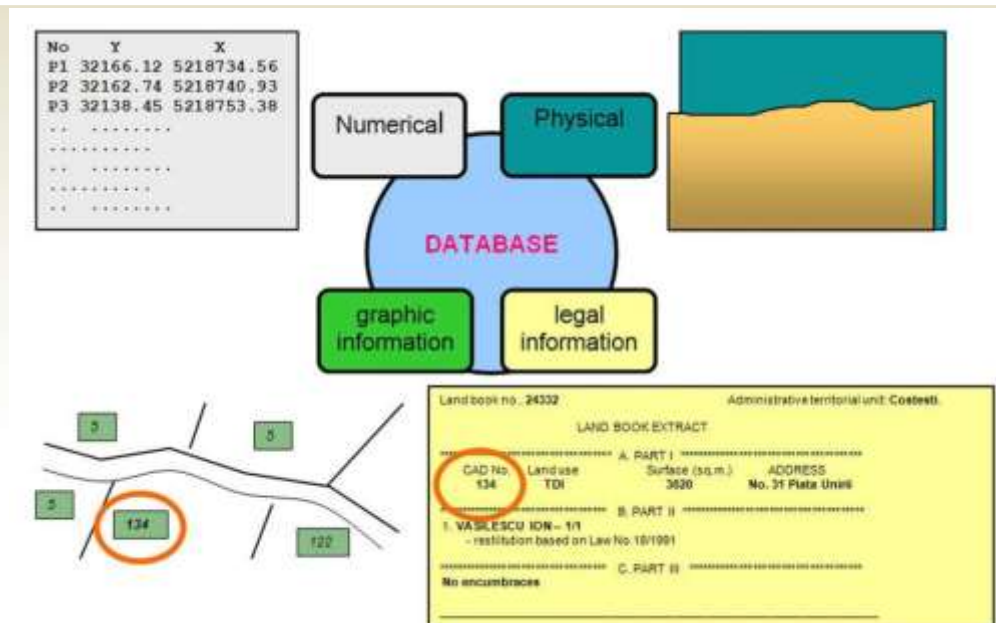

the cadastral land registry

the owner's alphabetical index

the owner's cadastral register

the cadastral plan

the annexes to part I of the land book

The DESKTOP CADGEN application is part of the informatic instrument package used to transfer data from the General Cadastre into the integrated system of Cadastre and Land Register **E-Terra**.

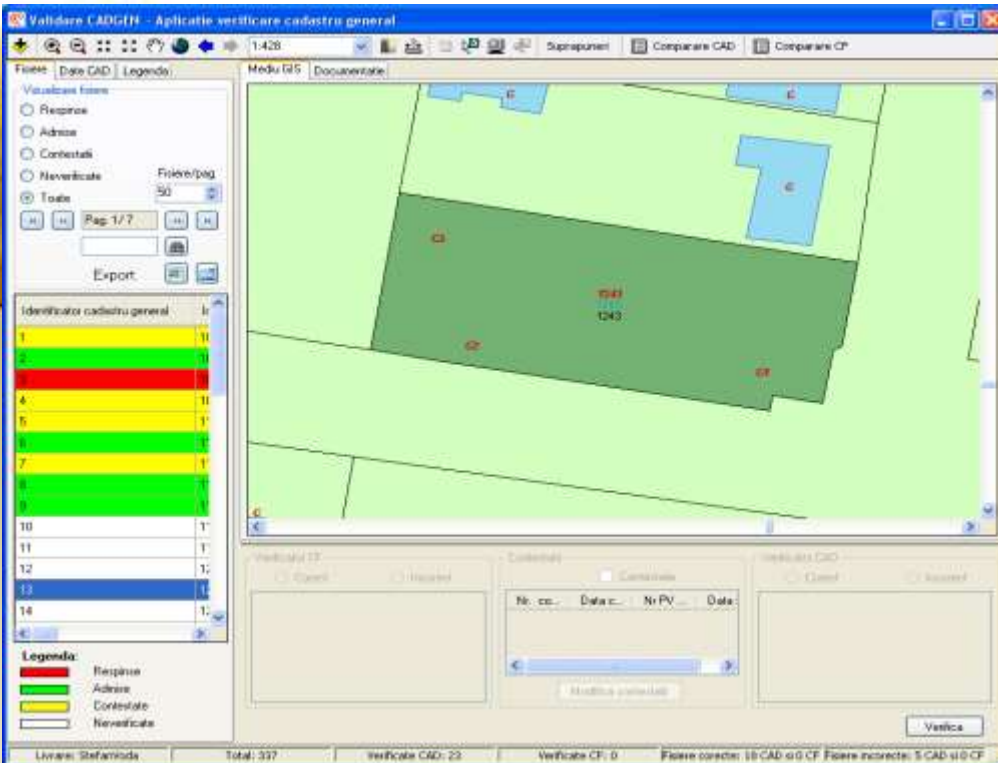

The main objectives
of the
DESKTOP CADGEN

To make efficient and to automate the process to validate/check files .cgxml, with cadastral data and land registry data, following the General Cadastre works

To standardize the working documents: standard forms of information sheets with cadastral data (extracted from e-Terra and sent to e-Terra)

To secure cadastral information

To follow the events in the system

The GIS medium is uploaded automatically with the following graphic layers:

- Lands (Reception Cad Gen)
- Constructions (Reception Cad Gen)
- Lands from other lots
- Constructions from other lots
- Administrative Territory
- County

The main window to verify cadastral data offers the following functionalities

A list with the buildings existent in the reception medium with the following attributes

A function to filter list (look for building) according to: lot number, general cadastre indicator i.e.

A function to filter list according to: files rejected, files accepted, files contested, files not approved, all files

Specific instruments to GIS medium

Complementing European Support for Agricultural Restructuring Project (C.E.S.A.R.)

Stage 1 – 2011

C.E.S.A.R. Project 1

19 administrative units grouped into 4 lots

The Timis County is included in Lot 1, with the administrative unit Ortisoara

Stage 2 – 2012

C.E.S.A.R. Project 2

31 administrative units, grouped into 4 lots

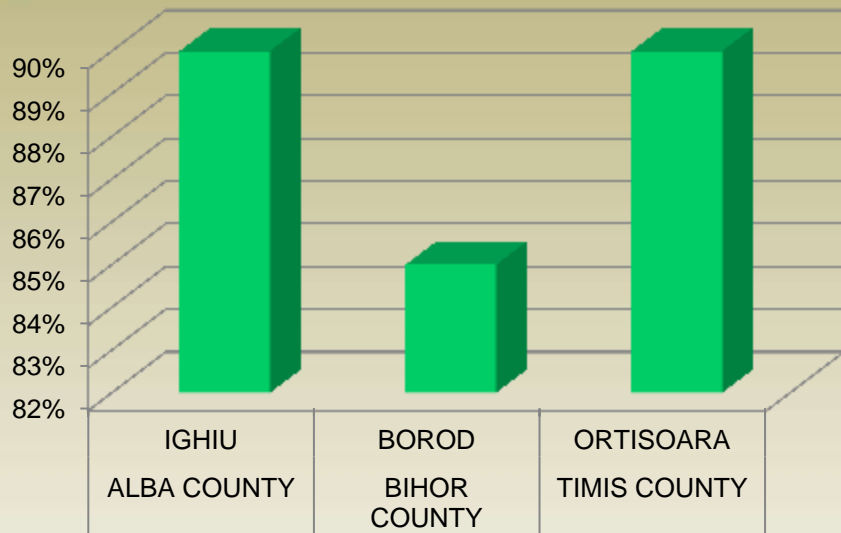

The Timis County is included in Lot 2, with the administrative units: Lenauheim and Sanandrei

C.E.S.A.R. Project 1 - Statistics -

Lot 1

Lot 2

C.E.S.A.R. Project 1 - Statistics -

Lot 3

Project C.E.S.A.R. 1 - Statistics -

Lot 4

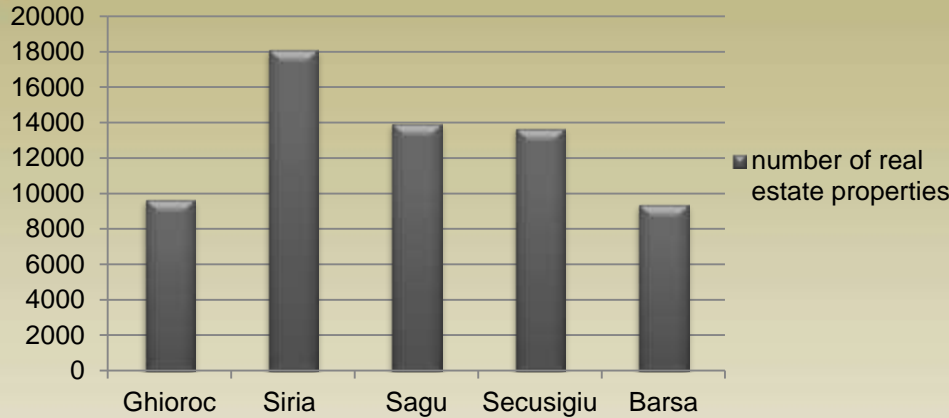

Project C.E.S.A.R. 2

- Statistics -

Arad County - LOT 1

Timis County - LOT 1

Bihor County - LOT 1

After Romania and The International Bank for Reconstruction and Development ratified the Loan Agreement, this project was suspended in March 2013, due to the lack of funds.

Conclusions... on transition from sporadic to systematic

The systematic land registration turned to be a very difficult and slow process, under the current circumstances.

Certain problems are restraining or delaying the activities, such as:

- ✓ The lack of ownership titles, lack of any documents to certificate the ownership or possession;
 - ✓ The unwillingness of the holders to cooperate, in spite of the advertising;
 - ✓ Financial challenge – the project was suspended due to the lack of funds.
- The entrepreneurs may continue the works with their own funds.

The National Agency for Cadastre and Land Registration estimates that by the year 2030, in Romania, the process of recording the buildings, total amount of 6 million, will be completed, so that E-Terra can provide, in real time, all the information connected to each building in an administrative territory.

Thank you for your attention!
